WAXED AMARYLLIS CARE INSTRUCTIONS

How do I care for my Waxed Amaryllis?

Waxed Amaryllis bulbs do not require any water because the bulbs contain all the water and nutrients they need to flower. Simply place them on a tabletop or any other flat surface in your home.

Keep your Amaryllis in a well-lit room, but avoid direct sunlight. Rotate it every couple of days to help it grow straighter.

How long before my Waxed Amaryllis blooms?

Every bulb grows at its own rate, and we have no way of controlling when they will actually bloom.

Waxed Amaryllis bulbs usually grow at least two stems over 4-5 weeks, producing multiple flowers per stem over the next 3-4 weeks.

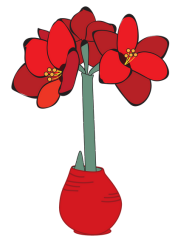

Blooms should be expected in 8 to 9 weeks after purchase. Some can take even a longer, around 10 - 12 weeks.
